GIMBLE

AUTONOMOUS DECISION DOMINANCE

CAPABILITY STATEMENT
NOVEMBER 2026

COMPANY

Gimble Technologies, Inc. (GTI) builds **Decision Operations** systems: the operating layer that keeps an organization's most consequential decisions level under turbulence. Each system senses what changed, fuses evidence with provenance, and keeps a defensible record of what was decided and why. Every product is live and open to anyone before a first conversation.

PRODUCT LINES

- **FABRIC** · indications & warning. Live open-source data triggers 10 published indicators and 27 sub-indicators; the judgment card shows the rule that fired. `fabric.gimbletech.com`
- **HARBOR** · maritime risk intelligence. Six official sanctions lists joined to live vessel traffic by exact IMO number, with an evidence card on every alert. `harbor.gimbletech.com`
- **CUSTODY** · space situational awareness. Orbital behavior and exposure from the public satellite catalog, read every six hours; plans for analysts and underwriters. `custody.gimbletech.com`
- **UNDERSTORY** · defense industrial base. A console over the 1,745-member public DIBC roster that measures where public data stops illuminating the lower tier. `understory.gimbletech.com`
- **ECHELON** · enterprise operations. A staff-action operating system: taskers, coordination and AI-assisted staff work with human review (demonstrator). `echelon.gimbletech.com`

GTI LABS

- **SI·GNAL** · technology news, scored for decisions. 145 vetted sources checked every five minutes. Released; free to read, with paid plans, a REST API and an MCP connector. `signal.gimbletech.com`
- **EIDOLON™** · websites, built by conversation. A voice-first website builder; free to start, with paid plans. `eidolon.gimbletech.com`

CORE COMPETENCIES

- **Decision instrumentation** · expensive, recurring decisions mapped, wired to evidence, and operated end to end.
- **Analytic assurance** · estimative-language discipline, calibrated confidence, and audit-ready decision records by construction.
- **Evidence provenance** · every material assertion labeled live, curated, modeled or synthetic, and traceable to its source.
- **AI with human authority** · agentic workflows governed by explicit delegation boundaries and human accountability.
- **Rapid deployment** · containerized-build delivery to cloud, on-premises or edge with no lock-in.

DIFFERENTIATORS

- **The product is the white paper** · we lead with working products, so a customer knows in advance that it works; then we refine it to their needs.
- **Honesty as architecture** · provenance labels and stated limits on every product, built in from the first line.
- **Founder depth** · veteran-led; a career spanning Army intelligence, enterprise consulting and senior defense data-science leadership.

Open it first.

FABRIC, HARBOR, CUSTODY, UNDERSTORY, SI·GNAL and EIDOLON each have a capability brief at `gimbletech.com/resources`. Engagements start with a Decision Sprint on one recurring decision; SI·GNAL, CUSTODY and EIDOLON subscriptions are available today, and Decision Operations engagements open with GTI's 2027 launch.
